Solutions for the four main scalp types

Scalp Type Analysis Process by AI

1. Enter normal self-awareness symptoms or concerns through customer interviews

2. Measure the customer's scalp in 6 places (no matter the order of shooting)

3. Transmit images to the AI analysis server.

4. Analyze the scalp type on the AI analysis is server.(Takes 10 to 40 seconds)

5. Review the analysis results.

6. Analysis results are also available to be checked on the mirror display with the customer.
Measurements history is available to be checked at any time on the scalp analyzer or mirror display.
